Problem Statement

The process of making Note should be quick and easy to use. A pen and scrap of paper are hard to beat for speed and convenience, but any note-taking app has to get out of your way. Whether it's at the office during an important client conference call, at home or anywhere else, we have to note down different types of notes and information on a routine basis. From someone's contact number to a witty quote on a blog, it could be anything.

Your notebook is something that needs to be always available, whether you're at your desk or flying coast-to-coast. At a minimum, we needed apps to be available on one desktop and one mobile platform.

Solution

This is where note-making apps come into play. This handy app let you keep note of everything. You can Register using Google Sign-In or by using email and store the data in firestore. You can also edit your notes , change the font and upload your pictures.

You can make as many notes as you want to there is no restriction on words. It also shows us when the user has last updated the notes.

Features

- User Login/Logout
- User Registration
- Forgot Password
- Create Notes
- Read Notes
- Update Notes
- Delete Notes
- Upload images
- Google sign-In

Cloud Platform

Firebase

Firebase is a platform developed by Google for creating mobile and web applications. It was originally an independent company founded in 2011. In 2014, Google acquired the platform and it is now their flagship offering for app development

Features

- Realtime database
- Data synchronization
- Machine learning tools
- One-click Google Analytics integration
- Multiple authentication methods (e.g. email/password, social media app, phone, anonymous, etc.)
